EX-15
Endpoint Security Monitoring

AIM:

To monitor and protect endpoint devices such as computers and servers from cyber threats, malware, and unauthorized access using EDR tools and security monitoring techniques.

PROCEDURE:

- Install endpoint security tools (EDR/antivirus) on all monitored devices.
- Monitor system activities, running processes, and network connections continuously.
- Collect and analyze endpoint logs and security alerts for anomalies.
- Detect suspicious behavior, malware activity, or unauthorized access attempts.
- Isolate or block compromised endpoints to prevent further spread.
- Respond to and remediate the detected threats to restore endpoint integrity.

TASK-1:

Task 1 Room Introduction

In this room, we will introduce the fundamentals of endpoint security monitoring, essential tools, and high-level methodology. This room gives an overview of determining a malicious activity from an endpoint and mapping its related events.

To start with, we will tackle the following topics to build a stepping stone on how to deal with Endpoint Security Monitoring.

- Endpoint Security Fundamentals
- Endpoint Logging and Monitoring
- Endpoint Log Analysis

At the end of this room, we will have a threat simulation wherein you need to investigate and remediate the infected machines. This activity may require you first to understand the fundamentals of endpoint security monitoring to complete it.

Now, let's deep-dive into the basics of Endpoint Security!

Answer the questions below

I have read the introduction task.

No answer needed | ✓ Correct Answer

TASK-2:

- Invoked network traffic
- Handles such as files or directories opened
- DLLs and memory-mapped files loaded

To learn more about Sysinternals, you may refer to the Sysinternals Room.

Answer the questions below

What is the normal parent process of services.exe?

wininit.exe | ✓ Correct Answer

What is the name of the network utility tool introduced in this task?

TCPView | ✓ Correct Answer

TASK-3:

To experience Wazuh in action, you may refer to the Wazuh Room.

Answer the questions below

Where do the Windows Event logs (.evtx files) typically reside?

C:\Windows\System32\winevt\Logs ✓ Correct Answer

Provide the command used to enter OSQuery CLI.

osquery i ✓ Correct Answer

What does EDR mean? Provide the answer in lowercase.

endpoint detection and response ✓ Correct Answer

TASK-4:

Answer the questions below

Click on the green View Site button in this task to open the Static Site Lab and start investigating the threat by following the provided instructions.

No answer needed ✓ Correct Answer

Provide the flag for the simulated investigation activity.

THM{3ndp01nt_s3cur1ty!} ✓ Correct Answer

TASK-5:

- Sysmon
- OSQuery
- Wazuh

Answer the questions below

I have completed the Introduction to Endpoint Security Monitoring room.

No answer needed ✓ Correct Answer

RESULT:

Endpoint security monitoring was successfully demonstrated using tools such as Sysmon, OSQuery, and Wazuh. Suspicious processes, network activity, and malware behavior were detected through continuous log monitoring and event analysis. The experiment showed improved detection of threats at the endpoint level, enabling faster isolation of compromised devices and prevention of unauthorized access, thereby strengthening the overall security posture.
